PROCEDURE

See attached list of applicable conversion vendor unit codes.

In order to process plans expeditiously, this completed form and the following requirements must be adhered to. Submittal of a new plan design must include the following, or it **will be returned** without a review being performed:

1. A minimum of two complete sets of plans and specifications.
2. A cover sheet describing the plan, including the plan designation, sheet numbers and titles.
3. The "cover" sheet shall have a 3" x 4" space in the lower right-hand corner for the department to insert the plan number and approval date.
4. Drawings shall include details pertaining to the concentrated loads (if applicable), electrical, plumbing and heating systems. If none, mark N/A on front of application.
5. Electrical drawings must include a panel schedule showing circuit details, breaker and wire sizes with circuit numbers on floor plans and load calculations. Show location of panel box and required clearance dimensions.
6. An isometric drawing of plumbing water lines, waste drain and vent lines indicating size of piping, fittings and type of materials.
7. An isometric drawing of gas lines indicating size of piping. Provide developed length & BTUH demand requirements for appliances.
8. Type of heat and size of furnace or heater. A/C output, if applicable. (Mark N/A in appropriate blocks if no systems.)
9. Size of heat ducts and material used.
10. Specifications, engineering data and test results, as necessary. For concentrated loads only
11. The plan must indicate where the insignia will be affixed.

An approved design plan shall be issued a plan number. Inspections and insignia are required for each structure.

However, if design changes from that approved plan occur during the approval period, details of that change shall be submitted to the Department along with a fee specified in WAC 296-150V-3000.

A copy of the approved design plans shall be made available to the inspector before any inspections can be made on the structures.
